

Syncplicity Business Edition

The only automated sync, back-up, collaboration, and file management service powerful enough for a business user yet easy enough for a novice.

The Syncplicity Difference

Central File Management

Centrally protect and manage files with policy, reporting, and real-time backup with instant restore across your organization both inside and outside of the firewall.

User Administration and Data Help Desk

Administrators can centrally configure and support user accounts from a central web console with rich operations such as remote restore.

Anywhere Access

Access files from any computer, device, or web application.

Centralized Collaboration

Syncplicity's policy controlled instant sync with versioning and permissions allow users to flexibly and securely share and collaborate.

No Limits

Unlimit yourself. Syncplicity can grow without limits on the number of users, devices, files, pooled SyncStorage, per user storage, or file sizes.

A Bridge to the Cloud

Synchronization with popular web applications like Google Apps, Zoho, and Scribd means popular web applications now work with the files on your computer without uploading or downloading.

Open and Extensible

Public APIs for Syncplicity functionality are available to enable rich extensibility with custom solutions and platforms.

Affordable

Solutions start at \$45 per month for three users with no long term commitment, setup fees, or hardware to purchase.

World-Class Support

Expert phone and e-mail support with guaranteed response time is available.

System Requirements

Windows XP, Windows Server 2003, Windows Vista, Windows Server 2008, Windows 7

Mac OS X 10.6

As the pace of business increases, your company is increasingly relying upon ready and reliable access and management of files. Syncplicity is the only solution to provide easy-to-use cloud-based file management for businesses that combines centralized management for IT and intuitive native support for Macs, PCs, and cloud applications for end users.

By keeping files backed up, versioned, synchronized, and shareable across a variety of supported endpoints such as PCs, Macs, file servers, and cloud applications like Google Docs, Syncplicity ensures files are always accessible from any computer or device, protected against inadvertent or malicious loss, and makes it easy to collaborate with colleagues or partners around the world.

For IT Administrators, Syncplicity reduces common file management problems and high costs. With company data now being stored not just on simple file servers and desktops inside the corporate network but also mobile devices, laptops, and cloud applications, managing the files that comprise the lifeblood of your company across these incompatible file islands is difficult and expensive. Syncplicity's advanced file management unifies all of these locations under a single file management framework to bring back centralized administration to a cloud-enabled environment.

Starting at just \$45 per month for three users with unlimited scalability and no long term commitment, Syncplicity Business Edition offers a powerful and affordable solution for the complex file management and collaboration problems faced by business users and IT administrators.

Central File Management

Administer, access, and protect files across your organization through:

- Capture files across servers and machines
- Control data flow in and out of your organization through company-wide sharing policies
- Administrative remote restore
- Preserve file backups and previous versions across entire organization
- Gain insight into files and file sharing
- List all managed folders across the organization
- Set permissions and sharing on any managed folder
- Gain insight into user storage
- Unlimited maximum storage and number of user accounts

The screenshot shows the 'Your Organization's Syncplicity Policy' page. It includes a navigation bar with links for Files, Install, Invite, Forums, Support, Apps, Account, and Console. The main content area is titled 'Review and adjust policy settings for your company and your users'. It features several policy configuration sections, each with radio button options:

- Registration Wizard Configuration:**
 - Bypass the configuration options screen in the Syncplicity Registration Wizard
 - Allow users to alter synchronization and sharing settings in the Syncplicity Registration Wizard
- Folder Sharing Policy:**
 - Company users can share folders with users outside of the organization
 - Company users can only share folders amongst themselves
- Shareable Links Policy:**
 - Anyone can access and download files through shareable links
 - Only authenticated company users can download files through shareable links
- Share Naming Convention:**
 - When accepting a share, append the owner's name to the name of the local folder
 - When accepting a share, use the name of the share alone as the name of the local folder
- Client Update Policy:**
 - All Syncplicity updates are automatically installed
 - Only updates required to keep Syncplicity online are automatically installed
 - No Syncplicity updates are automatically installed

On the right side, there are 'Other Tasks' (Add new users, Manage user accounts) and a 'Client Update Policy' section with explanatory text. A 'Submit' button is at the bottom.

User Management

Syncplicity's user management allows you to easily grant, change, or revoke user access to data. Our centralized console also allows you to pre-configure user accounts, and monitor sharing activities.

- Create new user accounts with pre-defined settings and shares
- Pre-configure which folders to sync and back up on users' computers
- Instantly restore any file or file version directly to a user's computer
- Add or remove users from existing shared folders
- Terminate or temporarily disable user accounts
- Set and re-set user passwords
- Start or stop synchronizing folders on any user computer
- Take action on behalf of users
- Add or remove a user from any share

Centralized Collaboration

Centralized Collaboration instantly synchronizes all your computers and all of your colleagues' computers with the latest version of your work and theirs. Additionally, Syncplicity immediately detects conflicting edits and handles them gracefully.

- Instantly synchronize files across your and your colleague's computers
- Ensure you and your co-workers are always working with the latest versions of your documents
- Comply with corporate policy by through policy controls on sharing and collaboration
- Collaborate using existing applications and files in their original locations. There is no need to move files or change the way you work
- Control permissions to give others read-only or read-write access to any folder or file
- Every change to the files is instantly backed up, versioned, and synchronized
- Access to unlimited version history and ability to go back to any previous version
- Conflicting edits are detected and handled to ensure no data is lost

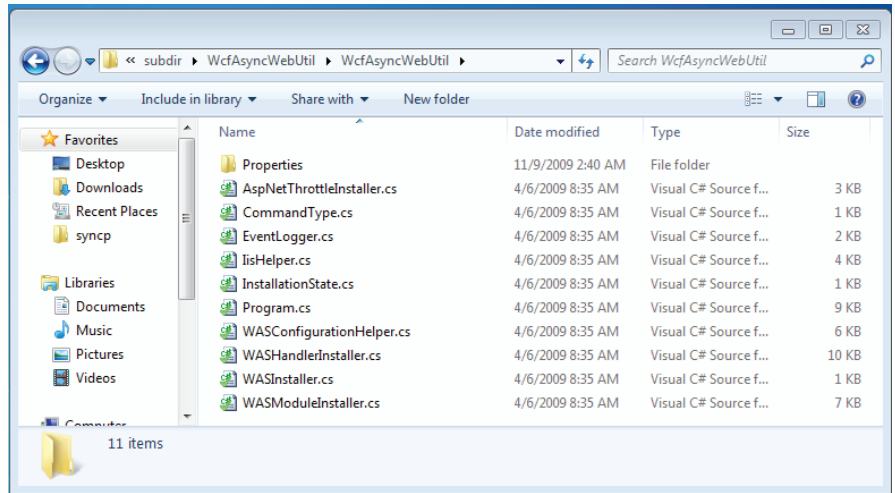

Automatic Backup

Syncplicity automatically backs up your files every time a change is made. Restore of current version and previous versions is instant.

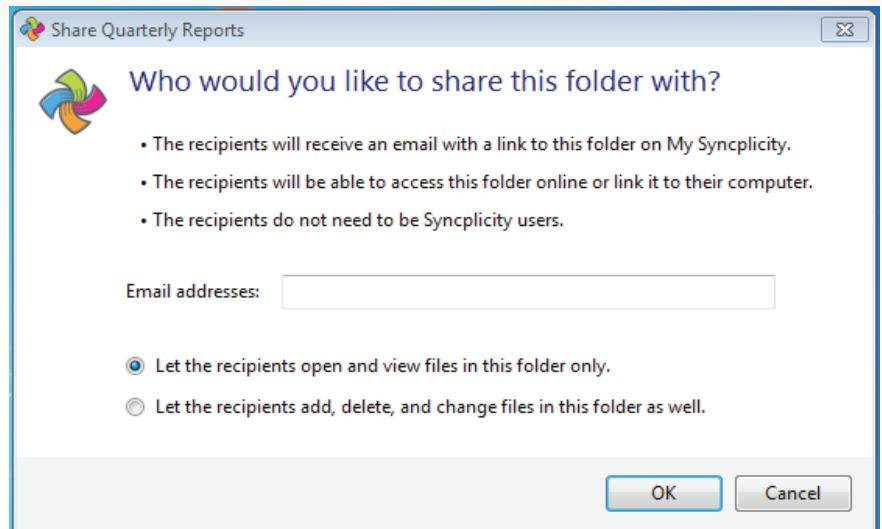

- Every file on your computer is easily backed up with a simple mouse click
- All your files are directly available in your online Syncplicity account
- Every change you make is immediately and securely transferred to your Syncplicity account
- Previous versions can be accessed restored at anytime.
- Data recovery is instant and painless from your online Syncplicity account
- Data is restored to its original location in the case of computer theft or a hard drive crash

Anywhere Access

Save once, access your files anywhere -from your laptop at home, your desktop at the office, or your cell phone on the road.

- Instantly synchronize files across your and your colleague's computers
- Ensure you and your co-workers are always working with the latest versions of your documents
- Collaborate using existing applications and files in their original locations. There is no need to move files or change the way you work
- Control permission capabilities to give co-workers read-only or read-write access
- Every change to the files is instantly backed up, versioned, and synchronized
- Access to unlimited version history and ability to go back to any previous version
- Conflicting edits are detected and handled to ensure no data is lost

Security

Syncplicity takes security seriously, utilizing strong military-grade encryption to ensure that your files are protected both during transmission and while at rest. For additional security, Syncplicity stores each file's unique encryption key in a datacenter completely separate from the datacenter holding the encrypted files, effectively separating the lock from the key. Every file is stored with multiple replicas for state-of-the-art robustness.

- All data is transmitted using strong 128-bit bank grade SSL encryption
- All data is stored using military-grade 256-bit AES encryption
- Data is stored on servers in geographically-separated data centers that are monitored 24/7
- Encryption keys and data are stored separately to ensure best-in-class security
- SAS70 Type II certification, DoD 5220.22-M/NIST 800-88 data destruction process for all decommissioned media used to store customer files, and state-of-the-art physical security provide the highest standard in data protection
